Problem Statement

- Many Mandarin learners struggle to write and recall Chinese characters
- Common issues include:
 - Forgetting stroke order
 - Difficulty retaining characters over time
- Traditional memorisation methods are:
 - Repetitive
 - Boring
- Result:
 - Slower learning progress
 - Increased frustration
 - Loss of interest in learning Mandarin

Solution

Rydit: Learn Mandarin – AI-Powered Learning App

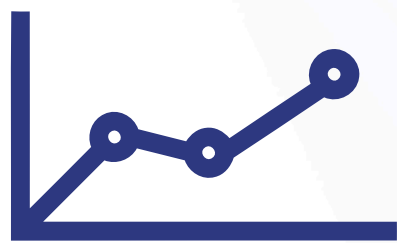

AI-Driven Handwriting Practice

Analyse user handwriting in real time, recognising stroke order, direction, and accuracy to improve Mandarin character writing.

Gamified Learning Experience

Incorporates levels, rewards, and interactive challenges to maintain motivation and make learning engaging and enjoyable.

Adaptive Learning Engine

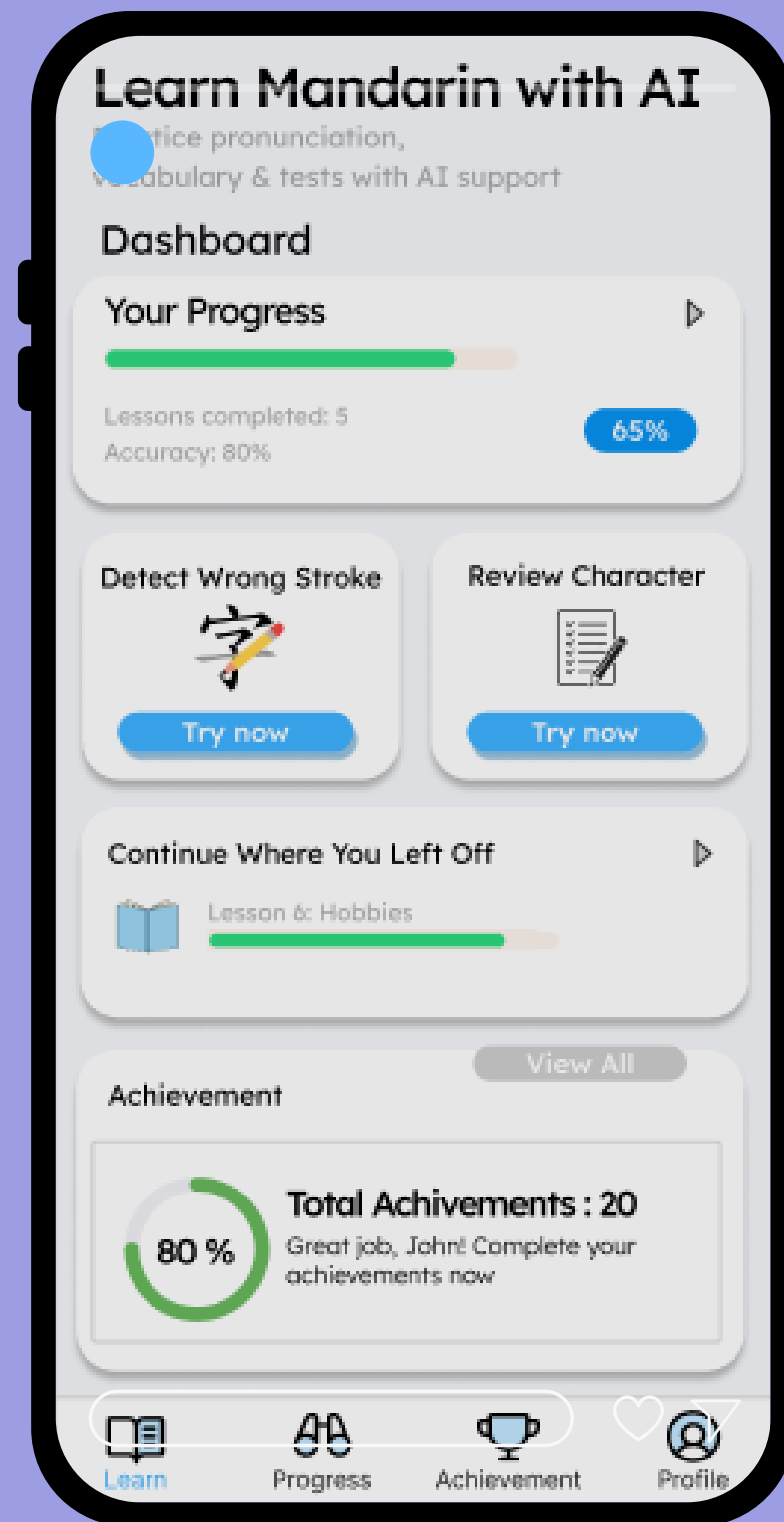

Tracks user performance continuously and revisits weak characters while reducing repetition of mastered content, improving long-term memory retention for personalised learning.

Effective and Enjoyable Learning

Combines AI feedback, smart repetition, and game-based learning to deliver a fun, efficient, and scientifically grounded approach to mastering Mandarin writing and vocabulary.

Goal of solution

- Improve accuracy of Chinese character writing
- Provide real-time AI feedback on stroke order and structure
- Adapt learning difficulty based on user performance
- Enhance long-term character retention through adaptive review
- Increase learner motivation using interactive and reward-based learning

Prototype Demonstration

Conclusion

Thank You
