

UNIVERSITY STUDENTS BRING ASTRONOMY OUTREACH TO SMK TAMAN UNIVERSITI

A team of 10 university students from the Field Astronomy (Astronomi Lapangan) elective carried out an astronomy outreach programme at SMK Taman Universiti as part of their Service Learning (SULAM) coursework. The visit aimed to make astronomy more accessible to high school students through a structured, interactive learning experience.

The programme featured an opening segment, a short astronomy talk, and a Kahoot quiz session to reinforce key concepts in a fun way. The main highlight was an Explorace rotation with three activity stations: a Straw Rocket Workshop and Competition, telescope-based planet exploration, and an astronomy terms crossword puzzle to strengthen scientific vocabulary.

The outreach successfully engaged students through hands-on participation while strengthening university-community collaboration. The organising team noted that future sessions could include simple pre- and post-activity questions to better measure learning gains and refine station timing for an even smoother experience.
